PROFESSIONAL PROFILE

I am a frontend developer with a solid background in creating attractive and functional user interfaces. Since I started my programming career in 2020, I have worked on a wide range of projects, including institutional rebrandings and the development of central management systems for healthcare companies, startups, and American universities. I have utilized libraries such as React with TypeScript, Material UI, Ant Design, and frameworks like Next.js, React Native, and Tailwind CSS.

My focus is on understanding user needs and translating them into efficient and intelligent solutions. I am known for my ability to understand client requirements, contribute innovative ideas, and solve problems independently. Additionally, I have excellent communication skills and thrive in team environments, allowing me to collaborate effectively in multidisciplinary teams. I am driven by the goal of developing high-quality products that improve the end-user experience.

WORK EXPERIENCE

Freelance Frontend Developer   July 2023 - Present

I participate in the customization of a university management system developed with React and Material UI for the components. I have also been involved in creating landing pages for the real estate sector and healthcare professionals using Next.js and Tailwind CSS. I work very closely with clients to ensure that their needs and expectations are met in the developed solutions.

GenomaWork - Frontend Developer   April 2022 - November 2023

I worked on developing customized employment management solutions using React, Ant Design, and CSS Modules for high-profile clients like Starbucks and Santander. I was part of a frontend team following agile methodologies, collaborating closely with the UX/UI and backend teams. I contributed to both the company's rebranding and the creation of various dashboards, significantly improving client operations and user experience through fully customized functionalities.

Outside The Cube - Frontend Developer   October 2021 - March 2022

I developed frontend functionalities using React, TypeScript, and Material UI for healthcare companies, working closely with the backend team and conducting weekly client demonstrations. I implemented optimizations for an internal development software that monitored the number of available or occupied therapy beds, ensuring efficient and continuous delivery of these improvements.

SKILLS

Web Development: React, NextJS, TypeScript, React Native.
UI/UX Design: Material UI, AntD, Tailwind CSS..
Tools & Platforms: Docker, Expo, Git.
Project Management: Agile methodologies, SCRUM.

LANGUAGES

Spanish (Native) - English (Intermediate)

EDUCATION

Plataforma 5 - Coding Bootcamp

Software Developer | Jan 2021 - Apr 2021
Over 800 hours of intensive full-time study over 14 weeks. I learned to program complete web applications, both Front-end and Back-end, using technologies such as React, React Native, and Node.js. Additionally, I trained in agile work methodologies, acquiring skills to collaborate in teams and manage projects efficiently.
